Dear sir,

As you said we made an estimation for constructing the bathroom's for the girls. we are staying at the outskirts of the city and safety for the children is the utmost priority to us.

The construction of bathrooms are planned next to the girls dormitories as an extension of the building along with the slab extension. So the bathrooms will be inside the dormitory.

we planned this way because the girl kids need not go out of the dormitory during the night times.

For constructing the same (4 Bathrooms) the estimation comes upto INR 2,30,000/-. The detailed estimation of the engineer copy is enclosed for your reference.

Otherwise we can construct 2 bathrooms next to the dormitory raising the wall height to the building level with out extending the slab for the time being. This costs upto INR 50,000/-

Kindly consider the above and do the needful.

We explained the same to your sister also.

We will take the photo's before and after the construction of bathroom's and will update you. We are happy to receive your sister during the construction time also.

Kindly visit our home when you visit India.
